

Campus Placement & Internship Pipeline

Name: Rekha Dhorigol

SRN: PES1UG24CS370

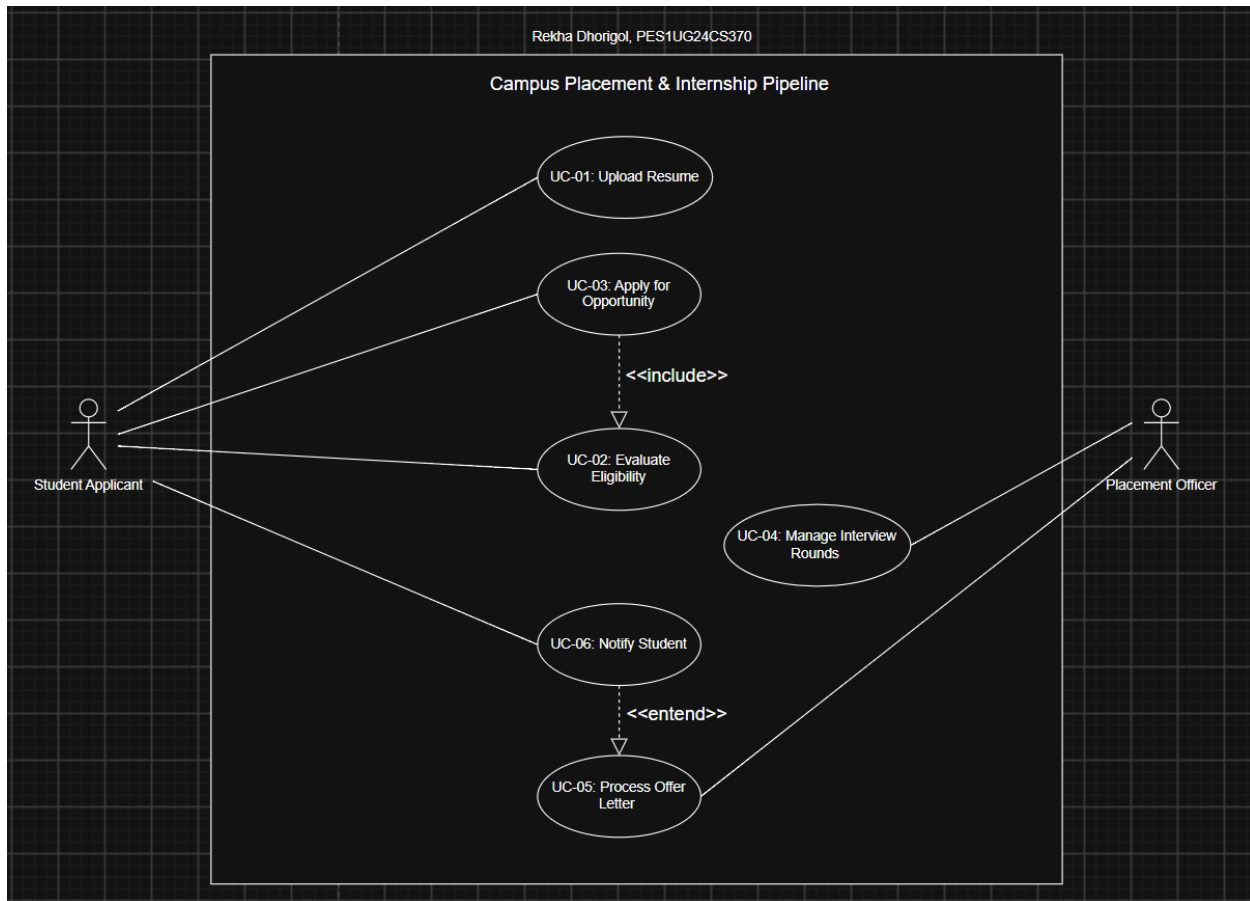

Section: G

1)Requirements Table:

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall parse uploaded student resumes in PDF format and extract relevant skill tags to create or update the student's placement profile.	High	Pass: The system successfully extracts relevant skill tags from a valid PDF resume and displays them in the student's placement profile. Fail: The resume is accepted but relevant skill tags are not extracted or stored.	Automates the collection of student skills for placement and internship processing.
FR-002	Functional	The system shall evaluate a student's eligibility for an active placement or internship opportunity using company-defined criteria, including CGPA, backlog status, and required skills.	High	Pass: Students meeting all configured criteria are marked eligible, while students failing one or more criteria are marked ineligible with clear discrepancy reasons. Fail: An ineligible student is incorrectly marked eligible, or the reason for ineligibility is not provided.	Ensures fair, consistent, and automated eligibility screening.
FR-003	Functional	The system shall allow eligible students to apply for active placement or internship opportunities.	High	Pass: An eligible student can submit an application for an active opportunity, and the application is recorded with a confirmation displayed to the student. Fail: A valid application is not recorded or no confirmation is provided.	Enables eligible students to participate in placement and internship drives.

FR-004	Functional	The system shall allow the Placement Officer to manage multi-round interview queues and update the application status after each interview round.	High	Pass: The Placement Officer can assign eligible applicants to interview rounds and update their status as pending, selected, or rejected, and the updated status is saved. Fail: A status or queue update is not saved correctly.	Supports efficient management of applicants throughout multiple interview stages.
FR-005	Functional	The system shall allow the Placement Officer to upload and process offer letters for selected students and notify the corresponding student.	Medium	Pass: A valid offer letter is associated with the selected student, its processing status is recorded, and the student receives a notification. Fail: The offer letter is incorrectly associated, its status is not recorded, or the student is not notified.	Supports the final stage of the placement and internship pipeline.
NFR-001	Nonfunctional - Security	The system shall encrypt all student academic records and offer documents at rest using AES-256.	High	Pass: Security verification confirms that stored academic records and offer documents are encrypted using AES-256. Fail: Any protected record or offer document is stored unencrypted or using weaker encryption.	Protects sensitive student academic and offer information from unauthorized access.
NFR-002	Nonfunctional - Performance	The system shall return eligibility evaluation results within 3 seconds for at least 95% of requests under normal operating conditions.	Medium	Pass: Performance testing shows that at least 95% of eligibility evaluation requests complete within 3 seconds under normal load. Fail: More than 5% of requests exceed 3 seconds.	Ensures timely processing when handling a large number of student applications.

2)UML Use Case Diagram:

3)Use-Case Flow Specification – Evaluate Eligibility:

Use Case ID: UC-01

Use Case Name: Evaluate Eligibility

Primary Actor: Student Applicant

Related Requirement: FR-002 – Eligibility Evaluation

Preconditions

1. The student has a registered placement profile in the system.
2. The student's academic information, including CGPA and backlog status, is available.
3. The student's resume has been uploaded and relevant skill tags have been extracted.

4. An active placement or internship opportunity with defined eligibility criteria exists.

Postconditions

1. The student's eligibility is evaluated against the criteria defined for the selected opportunity.
2. The student is marked as **Eligible** or **Ineligible**.
3. If the student is ineligible, the system records the specific discrepancy reasons.
4. The eligibility result is stored for the selected opportunity.

Main Success Scenario (Happy Path)

1. The **Student Applicant** selects an active placement or internship opportunity.
2. The system retrieves the eligibility criteria defined for the opportunity.
3. The system retrieves the student's CGPA, backlog status, and extracted skill tags.
4. The system compares the student's details with the configured eligibility criteria.
5. The system confirms that the student satisfies all required criteria.
6. The system marks the student as **Eligible**.
7. The system stores the eligibility result and displays the eligible status to the student.

Alternate Flow – Student Fails Eligibility Criteria

1. During eligibility evaluation, the system detects that the student fails one or more eligibility criteria.
2. The system identifies the specific discrepancy, such as insufficient CGPA, active backlog, or a missing required skill.
3. The system marks the student as **Ineligible**.
4. The system records the ineligibility result along with the discrepancy reason(s).
5. The system displays the reason(s) for ineligibility to the student.
